

Our COVID-19 Response

We're taking every precaution to keep patients and team members safe:

- Team members and patients receive daily temperature checks and health screenings.
- Team members and patients social distance at least six feet when possible.
- Our front desk team wears face coverings and our clinical team wears personal protective equipment (PPE) when in close proximity to patients and visitors. We ask that all patients wear face coverings while in the building too.
- We routinely clean and sanitize our office according to CDC and OSHA guidelines, including all patient rooms, waiting area, common-area surfaces, door handles, faucets, etc. We also have sanitation wipes and hand sanitizer regularly available.

If a team member or patient tests positive for COVID-19:

- Our team follows all guidelines set by the CDC, including notifying our local health department for contact tracing.
- We immediately inform all team members of the possible exposure. Team members who are potentially exposed are sent home to quarantine for the recommended CDC time period.
- A thorough cleaning of the workspace used by the infected individual is conducted as part of our cleaning and disinfecting routine.

Your health and safety is our priority. If you have any questions on our COVID-19 response, please let us know.
